- Ajay Chovatiya- 202201203
- Darshan Gami- 202201205
- Harmit Khimani- 202201231
- Anshu Dhankecha- 202201234
- Marmik Vasava- 202201252
- Nishant Italiya- 202201258

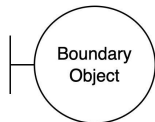

→Entity Objects

Entity objects represent the core business data in the system. They are responsible for holding persistent information and maintaining the rules around that data.

1. Job Seeker
2. Job Recruiter
3. Database

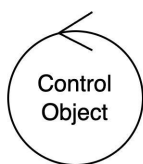

→Boundary Objects

Boundary objects act as the interface between the system and external users. They manage user inputs, outputs, and system interactions

1. Profile Update UI
2. Forget Password Page

→Control Objects

Control objects manage the logic and flow between the Entity and Boundary objects. They handle system processes and make decisions based on inputs and business rules.

1. Profile Controller
2. Profile Validator
3. Reset Controller
4. Token Validator
5. Delete Controller
6. Password Validator
